

ABSTRACT OF THE DISCLOSURE

A transport container (40) for slides (4) for immunological labeling of thin tissue sections (2a) is disclosed. The transport container (40) is embodied in the form of a trough which comprises a peripheral delimiting wall (49) that is closed off by a base (50). There is embodied in the interior of the trough on the delimiting wall (49) at least one peripheral step (57) on which the slide rests and is spaced away from the base (50) of the transport container (40).
